Health & safety training for the factory hygienist of Bunge Zrt.

Factory hygienist: Tímea Vincze

Instructor: Zoltán Nábrádi

Insect and rodent control at the factory:

We have integrated pest and rodent control in the factory area. Adhesive edge traps placed inside the buildings do not contain any pesticides, so there is no risk of poisoning. The adhesive sheets are replaced on a weekly basis.

Contents of the feeding boxes located on the factory site:

Contents of rodent feeding boxes with warning labels and warning wall sign (Located outside the buildings): Varat pulp: 60g / crate and Varat block: 60g / crate. Active ingredient of the pesticide used: Brodifakum 0.005%. In case of possible poisoning, antidote: Vitamin K / Konakion inj./ Feed boxes are checked weekly and filled with fresh pesticide.

Handling of pesticides in case of spillage:

In the event of damage to the crates in the area, the anticoagulant spilled from the crates should only be returned to the crates with rubber gloves and the pest control contractor should be notified as soon as possible so that the contractor can rectify the problem within 24 hours and replace the crate.

Material Safety Sheets for Exterminators and Non-Exterminator Products:

The Material Safety Sheets for Exterminators and Non-Exterminator Products are filed in the factory hygiene office. If any Form is updated, the Contractor shall update it immediately.
